

D5601

Intrinsically Safe

Wireless Differential Pressure Transducer

- Atex Certified for Class 1, Div 1
- True Wet/Wet Differential Connections
- Bluetooth 4.2 Wireless Communication
- Pairing Mode or Advertising (Beaconing) Mode
- 32-Bit Digital Pressure Data Output
- 16-Bit Digital Temperature Data Output
- Weatherproof IP65 Rating
- Variety of Pressure Ports
- CR2032/CR2050W Battery Compatible

Features

- Heavy Industrial CE Approved
- As low as $\pm 0.1\%$ Pressure Non-Linearity
- $\pm 1.0\%$ Total Error Band (TEB)
- 0 to 60°C Compensated Temperature
- Operating Temperature (Battery):
 - -20 to 70°C (Sony/MuRata CR2032)
 - -20 to 85°C (Murata CR2050W)
- Withstands 50g shock and maximal 10g vibration
- Excellent Long-term Stability

Applications

- Gas and Liquid Flow Measurements
- Tank Liquid Level Measurements
- Liquid and Gas Filter Monitoring
- Corrosive Gases and Liquids
- Remote and Hard to Reach Locations
- Factory Process Control
- Walk-around Condition Monitoring

The D5601 series from TE Connectivity's Sensors Business Unit sets the price and performance standard for wireless differential pressure transducers used in demanding industrial and smart factory applications.

The modular D5601 wireless pressure transducer uses our Ultrastable MEMS sensing element enclosed in a stainless steel and PBT housing. The high accuracy 24-bit Bluetooth 4.2 connection eliminates hard wiring and enables remote process control and monitoring. This series is suitable for the measurement of gas or liquid pressures including harsh media such as contaminated water, steam, and mildly corrosive fluids.

The wetted surfaces of the pressure ports are made from 316L stainless steel. The port design uses no internal O-rings or organics exposed to the pressure media which provides excellent durability and long-term performance.

The D5601 is FM certified for Intrinsic Safety:

IS Class I, Div1, Groups A, B, C, and D;

Class I Zone 0, AEx ia IIC T4 Ga;

Ex ia IIC T4 Ga;

II 1 G Ex ia IIC T4 Ga

FCC, ISED and RED compliant

Specific conditions of use

1. The non-metallic parts incorporated in the enclosure may generate an ignition-capable level of electrostatic charge. Upon installation, care shall be taken to avoid locations where the external conditions are conducive to the build-up of electrostatic charge on such surfaces. Additionally, the equipment shall only be cleaned with a damp cloth.
2. The Bluetooth Pressure Transducers do not have an earth ground terminal. The transducers shall be earth grounded as part of the final installation.
3. The Model D5601-00x2xx-xD Pressure Transducer shall use only the CR2032 Sony/Murata cell. The ambient range is $T_a = -20^{\circ}\text{C}$ to $+70^{\circ}\text{C}$.
4. The Model D5601-00x3xx-xD Pressure Transducer shall use only the CR2050W Murata cell. The ambient range is $T_a = -20^{\circ}\text{C}$ to $+85^{\circ}\text{C}$.

D5601 - Differential Operation

Differential pressure transducers require special attention to ensure proper operation and avoid damage:

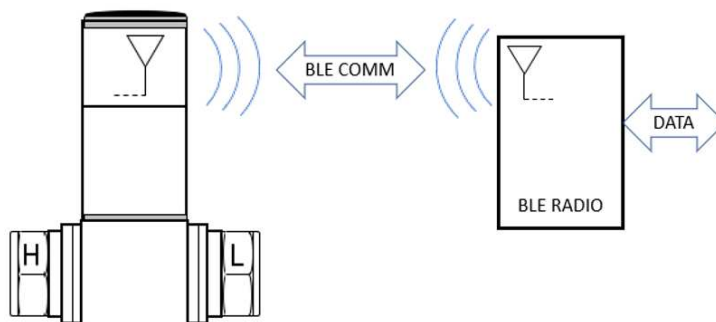

- The transducer can measure both positive and negative pressures at the limits stated on the data sheet.
- The ports are marked with an “H” (high) and “L” (low). The highest positive differential pressure can be applied to the “L” port is +150 psi (+10 bar) greater than “H” port.
- The full specified differential pressure of +500 psi (35 bar) can be applied to the “H” port.
- The line pressure (common mode pressure) limit is 1000 psi (70 bar). This is the highest pressure above ambient that’s applied equally to both “H” and “L” ports without causing damage.

Communication Protocols

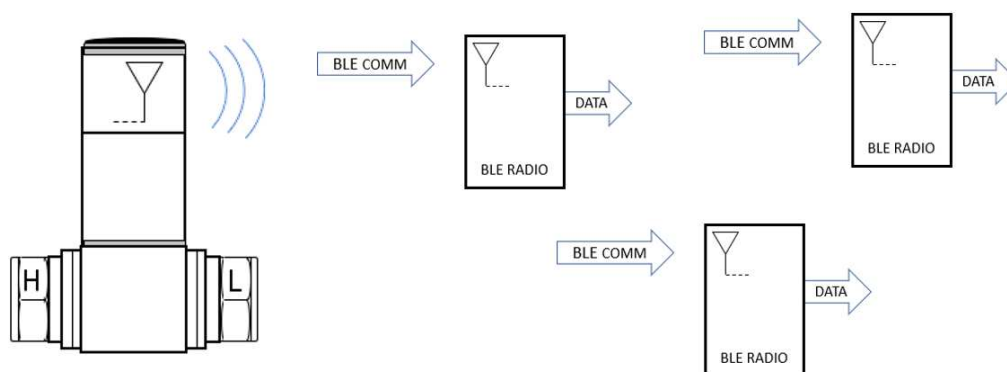

Pairing mode (Model D5601 – xx0):

- The device is set up to be both discoverable and connectable.
- The device is constantly listening for a signal from any other Bluetooth device within range that might send out an inquiry for connection (connection request).
- Once a signal is received and acknowledged, a single two-way communication channel is established, and the two devices will only communicate with each other or be paired.

Advertising (Beaconing) mode (Model D5601 – xx1):

- When power is first applied (insert battery), the device enters the configuration mode (six hours long) which facilitate pairing so updates and software changes can be made. The device is set up to be discoverable but connectable for configuration.
- Six hours after the last pairing, the transducer will switch to low power advertising mode and begin transmitting data. The device is constantly transmitting data (advertising) at higher intervals to save battery. Any other Bluetooth device within range can receive the data and may establish a two-way connection for configuration.
