

문제 8 reference input of 0 즉 0인 full state feedback controller 설계.

$$u = -\vec{B} \vec{K} \quad \dot{\vec{x}} = \vec{F} \vec{x} \quad \leftarrow \text{Eigen vector}$$

$$u = \begin{matrix} -\vec{B} \vec{K} \\ -\vec{K} \vec{x} \end{matrix} \quad \dot{\vec{x}} = \vec{F} \vec{x} + \vec{G}(-\vec{B}) \vec{K} \vec{x} \\ = (\vec{F} - \vec{G} \vec{B} \vec{K}) \vec{x}$$

$\dot{\vec{x}} = \vec{A} \vec{x}$  이면 ~~시스템~~ pole 위치는 pole은 ~~이~~ Eigen Value.

~~$$\vec{x}(t) = e^{\vec{A}t} \vec{x}(0)$$~~

~~$$\dot{\vec{x}}(t) = \vec{A} e^{\vec{A}t} \vec{x}(0) = \vec{A} e^{\vec{A}t} \vec{x}(0)$$~~

$$\vec{x}(t) = e^{p_i t} \vec{x}(0) \quad \dot{\vec{x}}(t) = p_i e^{p_i t} \vec{x}(0)$$

$$\dot{\vec{x}}(t) = p_i e^{p_i t} \vec{x}(0) = \vec{A} \vec{E} e^{p_i t} \vec{x}(0)$$

$$p_i \vec{x}(0) = \vec{A} \vec{x}(0) \quad p_i : \text{Eigen Value. } \Rightarrow$$

~~pole~~ 
$$(p_i \vec{I} - \vec{A}) \vec{x}(0) = 0$$

~~pole~~ 
$$= \det(p_i \vec{I} - \vec{A})$$

~~$$\dot{x} = (F - G B K) x \quad CE = \det(F - G B K) \neq$$~~

특정  $\lambda$  가 있는 Transfer function of  $CE = \det(F - G B K) \neq$

~~Zero는  $\det \begin{bmatrix} sI - F & G \\ H & J \end{bmatrix}$~~

~~$$Y = H X + J U$$~~

~~$$\dot{X} = (F - G B K) X$$~~

~~$$\frac{\det \begin{bmatrix} sI - F & G \\ H & J \end{bmatrix}}{\det(F - G B K)}$$~~

~~$$\dot{x} = (F - G B K) x \quad (sI - F + G B K) x = 0$$~~

non trivial solution  $\det(sI - F + G B K) = 0$   
 $= CE.$

특정 system transfer function의 pole은 같은 계수를 비교하여 일치
